

NEW PRESSING MACHINES AND SOLUTIONS

Sergiani, a complete range to satisfy all your pressing needs

Following the introduction of its new machines at the Nuremberg fair, SCM is to further strengthen its presence in the pressing machinery market with an even wider range of solutions to satisfy all market sectors. In addition to the **sergiani gs** manual hot presses and the **sergiani gs-a** automatic loading presses, the company now expands its range of presses with the **PF** cold presses, **gsi-a** and **gsi-k** presses for edge glued beam panels, **3D Form** membrane presses, **VB** vacuum box presses, and various **production line automated solutions** with a single daylight or multi daylight with simultaneous loading.

A NEW RANGE OF ELECTRONICALLY CONTROLLED PRESSES

The new GS-A series is designed to meet the diverse needs of our customers, offering the best solution for pressing panels and doors.

Electronically controlled presses with automatic loading/unloading for panel finishing, providing the best surface and bonding quality of the pressed products thanks to the special technical-structural solutions and great machining precision.

The expanded range of various models with diverse configurations can satisfy every production need.

- **Electronic control of all machine functions** using a Siemens digital touchscreen operator panel.
- **A reliable and efficient** loading belt, with a continuous cycle Mylar loading system.
- **High versatility** thanks to the longitudinal and transversal loading possibilities as well as configurable production lines set according to the customer's needs.
