

## SCM revolutionizes the world of Nesting

*The new Morbidelli X range, with higher speed and flexibility in panel shaped cuts, at the Open House "Smart&Human Factory"*

At the Open House "**Smart&Human Factory**" (January 31 – February 2, 2019) presents the world premiere of its new **morbidelli x** range of CNC nesting machining centers.

The new machining centers **morbidelli x200** and **x400** apply top performance, 5-axis "all-in-one" technology to dedicated solutions for Nesting machining processes that are in line with the requirements of a market that is increasingly oriented to "Batch 1" production and therefore, needs to combine high speed and outstanding flexibility in panel cutting patterns. The footprint - from the worktop to the drilling heads to the innovative machine tool magazine for tool changeover in record time - is increasingly less invasive, smarter and more functional. Every detail in these machines, including the restyled design, has been implemented with the utmost accuracy and care, ensuring optimal performance, efficiency, and the level of quality that is required for business growth potential.

*"The new morbidelli machining centers have been designed on the basis of market feedback. All the most popular innovations of the m100 and m200 Morbidelli work centers have been transferred to these new designs,"* confirms **Bruno Di Napoli, the SCM Machining Centers Business Unit Manager**. *"The new, highly innovative range is the perfect solution for the vast majority of larger and smaller furniture manufacturers."*

With their improved-**performance** feeding magazines, different **safety** system options to meet any needs, and greater machining **precision** for even the most complex items, our new generation of Morbidelli machining centers can fulfill the requirements of the most demanding customers. Featuring the **Maestro** software suite, they can also be equipped with automated loading and unloading systems and used both in **cell** and in **stand-alone versions**.
