

New 'VERTICUT'
A VERTICAL PANEL SAW - STURDY AS A BIG MACHINE, STREAMLINED LIKE
A SMALL ONE!

SCM proudly presents the new VERTICUT 60, the vertical panel saw for dynamic, developed panel cutting requirements, for those seeking a **versatile machine capable of operating in small spaces.**

The VERTICUT design, developed by SCM, was based on the **desire to make the production process really simple and easy in any working condition.** The designers were driven to focus on an “unusual” market sector, **smartly combining sturdiness and smoothness** so that this superior machine now rivals other manufacturer's models.

STURDY AND WITH THE PERFORMANCE OF A BIG MACHINE...

To suit all cutting requirements, VERTICUT 60 is available in two versions, one manual and one automatic with continuous action, having working dimensions: 4300 mm for horizontal width cutting and 2080 mm height cutting. Both versions fully benefit from the 2200 mm vertical cutting height with a working thickness of 60 mm to meet the most diverse machining needs.

The generous, functional standard kit is its considerable strength in terms of flexibility and cutting results on all materials. In particular, the standard kit includes:

- **Linear recirculating ball screw guides for horizontal and vertical sliding** - minimising operator effort on all moving units, for improved smoothness during cutting;
- **Independent scoring saw blade** guaranteeing optimum cutting quality on all types of surface;
- **Automatically movable supporting surface** making horizontal cutting safe and immediate without colliding with the worktable supporting elements;
- **Sliding support for narrow workpieces** provides total support for cutting narrow strips;

VERTICUT also stands out due to the new design with strong, well-developed lines giving it a decidedly dynamic look.

...COMPACT LIKE A SMALL MACHINE, the added value of 'linear guides'

There are many benefits from sliding on linear recirculating ball screw guides, the main ones being:

- the certainty of **top quality, uniform results over time**;
- great **freedom of movement and comfort** guaranteed during cutting cycles.

Also, the possibility of completely excluding the side suction duct allows large panels to be loaded from both sides without any compromise, ensuring **great versatility compared with other solutions usually seen on the market**.

Scm invite you to come and discover **Verticut** that will be on show at **Technodomus**, the International Expo of Wood Technology for the Furnishing and Construction Industries, **from 20th to 24th April 2012 at Rimini Fiera**.
