

Scm Group presents its high technology at the Dubai Woodshow

*Dubai World Trade Center
Stand B240
7-9 March*

Scm Group, the world leading producer of technologically advanced solutions for the woodworking industry, is to participate in the twelfth **Dubai Woodshow, 7 to 9 March 2017, at the Dubai World Trade Center.**

In its 300-square-metre **Stand B240**, Scm Group will showcase its high-tech machinery for processing wood and advanced materials. On display at the Dubai Woodshow will be solutions that meet the needs of any type of company, from small workshops using "classic" machines to large industrial corporations requiring technological solutions that can combine special high-quality processing with high-volumes. **Scm Group is the perfect partner for any type of company, as it can provide clear answers to every kind of request.**

Participating in the Dubai Woodshow has a special added meaning this year, since **in 2020 the United Arab Emirates is to host the Expo, whose theme will be "Connecting Minds, Creating the Future"**. A theme that is very dear to Scm Group as well, being a company that is committed to offering its customers "Industry 4.0" solutions that facilitate communication between operators and machines and between one machine and another, in an effort to "create the future" also in the woodworking industry.

The spotlight at the Dubai Woodshow will be on high-tech solutions that are highly-flexible. Specifically, making their world debut in the World Trade Center halls are **the new 5-axis Morbidelli Author machining centres**, exceptional machines that were welcomed with enthusiasm by customers upon their presentation at the SCM Rimini headquarters earlier this year. **What makes these machining centres stand out is their use of "all-in-one technology"**: Compact machines, which help save production floor space, packed with technological solutions that offer considerable competitive advantages to companies in this industry. As for machining centres in general, the SCM Accord 25 FX is to be featured prominently as well, now equipped with a new electro-spindle and an on-board tool changer.

Noteworthy among the SCM exhibits at the Dubai Woodshow is also a high-tech solution for industrial solid-wood edgebanding and scoring of fire doors performed by the **Stefani Solution MD X, equipped with a spindle moulder unit**. Using this solution will help you cut production times and costs, combining two machining operations in a single machine. Among edgebanders on display in Dubai will also be the **SCM Olimpic K560 HP**, a machine dedicated to PVC processing and providing all types of finishing thanks to numerically controlled axes. A type of solution that uses software programmes to provide total process control.

As for sanding and calibrating at the Dubai World Trade Center, expect to see another new product that was just recently introduced by the Group. This is the **DMC Eurosystem**, designed specifically for companies that manufacture a wide variety of products. Thanks to its extraordinary flexibility, the DMC Eurosystem can provide the right solution for all sanding and calibrating requirements.

Other noteworthy Scm Group products to be shown at the Dubai Woodshow include such important new machines as the **Gabbiani Galaxy 3 110** single-blade beam saw and the **Morbidelli Cyflex Hp drilling centre with independent spindle**.
