

## SCM solutions and services in the spotlight at IndiaWood

*The 2026 edition of IndiaWood will provide SCM with an important opportunity to present its cutting-edge technologies and services, developed to optimise customers' production processes and business requirements.*

**26 February - 2 March 2026**  
**Bengaluru International Exhibition Centre (BIEC)**  
**Hall 3A, Booth E 304**

A new edition of IndiaWood is approaching and SCM, a global leading manufacturer of secondary woodworking machinery, is ready to showcase a selection of its most advanced technological solutions and services.

With its participation in IndiaWood 2026, the Italian Group reaffirms its **strong commitment to the Indian market**, in line with the strategic investments made in recent years, including the opening of its subsidiary with local warehouse in Bengaluru and Chennai, and the establishment of a local team of technicians and sales engineers. This team supports customers across all application areas, from bespoke joinery and large-scale furniture production to the manufacture of wooden doors and timber buildings.

The wide range of technologies on display – presented both physically and through digital solutions – is specifically designed to meet the Indian manufacturers' needs. The market is increasingly focused on optimising production processes while enhancing design quality and product customisation. **The solutions exhibited cover multiple woodworking requirements**, from panel processing to solid wood machining and joinery applications.

Demands that at IndiaWood will also find a concrete response in the **new SCM services** developed to support the customer in after-sales. In a dedicated **Digital Control Room** visitors will be able to discover the many benefits available for machines connected to SCM's IoT platform. Here they will be able to discover how data are transformed into **bespoke assistance and advisory services** of a **proactive and predictive** nature with a view to guaranteeing the client operational continuity thanks to the most evolved digital technologies and constant attention by the SCM Service team.

### SCM TECHNOLOGIES IN THE SPOTLIGHT

#### **CNC machining centres for routing and drilling: morbidelli m100**

Highly modular 5-axis CNC machining centre that provides answers to all the problems associated with woodworking.

Unmatched finishing is possible thanks to the **JQX (Just Quality eXtreme)** 5-axis direct-driven spindle head which ensures the total absence of vibrations even with huge material removal at high speed and with the high-performance drilling heads with **RO.AX (Rotoaxial spindle technology) spindles** and rotation speed up to 8000 rpm.

Other advantages are provided by **TV FLEX**, the manual positioning table that is able to grant the best flexibility: rails and pods position quotes are visualized on TECPAD remote control display according to the program loaded; no limits manual positioning of rails, pods and clamps; aided positioning through measuring tapes both on frame (for rails) and rails (for pods and clamps); tubeless design.

Software is another main feature: just a few clicks to design and manufacture pieces of any shape, the machine is run by the **Suite Maestro** which has specific modules for every production cycle.

#### **CNC machining centre for drilling: morbidelli cx100**

This solution carries out all drilling operations, grooving and vertical routings. Very high productivity guaranteed, no operator's intervention for the worktable tooling. Another advantage is the **perfect finish**: drilling from the top allows to use the outside of the panel as a reference concealing defects; the result is to always **move any difference in thickness** to the inside of the cabinet.

**Perfect joints** are also guaranteed thanks to the automatic reading of the workpiece length: any discrepancy between the actual length of the panel and the one set is corrected by a **precision reading laser** allowing for perfect alignment.

#### **Edgebanding: stefani kd**

stefani kd is the ideal edgebander for working different types of panels even with delicate surfaces thanks to the **upper belt presser**.

The standard **SGP glue pot** with the special anti-adherent plasma treatment allows the use of **two different types of glue, EVA and PUR** for perfect edgebanding quality.

The machining of two different radii and 12 mm solid wood lipping for panels up to 60 mm thick is possible thanks to the automatic set up of the working units performed with NC controlled axes.

The **working speed of up to 20 m/min** makes stefani kd the ideal edgebander for companies that need to produce panels in large quantities and with extreme quality.

On show also the following joinery machines: "**nova si 400**" circular saw, "**nova ti 105**" spindle moulder and "**profiset 60ep**" throughfeed moulder.

**Kunal Roy**, Country Manager of SCM India, commented:

*"IndiaWood is a strategic platform for SCM to demonstrate not only our technologies, but also the strength of our local and regional setup. We currently operate two warehouses in India with over 50 machines: one in Bengaluru to ensure fast deliveries for the domestic market, and a second in Chennai, located in a DHL free zone, which gives us the flexibility to quickly serve customers across the Indian subcontinent. This structure allows us to respond faster to market demand and support manufacturers in India as well as visitors from countries such as Nepal and Sri Lanka, with reliable availability and shorter lead times."*

---

**Scm Group** is a global leader in technologies for machining a wide range of materials – wood, aluminium, plastic, glass, stone, metal and advanced materials - and industrial components. Across the globe, the group's companies act as highly reliable partners to leading industries in a wide range of product sectors, from furniture to construction, automotive to aerospace, and nautical to plastic machining.

Scm Group coordinates, supports and develops a system of industrial excellence, with highly specialised and integrated plants in Italy and other sites in Germany, the United States and Brazil with production dedicated to local markets.

Scm Group has a turnover of 900 million euro, more than 4,000 employees and a direct presence on five continents.
